

CeDeL Solutions offering Java customization services

CeDeL Solutions is pleased to announce that we can now provide customized Java code to assist users with the creation, reporting and maintenance of their Creo Schematics (formerly Routed Systems Designer) designs. If you have specific requirements that are not addressed by the package as released then we may be able to address them using the Java toolkit that is available for users of RSD*.

Projects that have been produced in the past include:

-
- Catalog search tools to find items in the central catalog, place and apply datasets
-
- Block Interconnect Diagram-Wiring Diagram Interconnect management
-
- Specialized reporting tools
-
- Special automatic naming conventions
-
- Assigning properties to items in the design from a database
-
- Criteria-based application of properties
-
- Design rule checking

If you would like more information please contact CeDeL Solutions by clicking [here](#) and we can discuss your requirements.

* Note: RSD Lite does not support the Java toolkit
